

PROJECTE D'OBRES D'URBANITZACIÓ DEL SECTOR PARC DE L'ALBA DE CERDANYOLA DEL VALLÈS.

ANNEX 4.- TRAÇAT

1.INTRODUCCIÓ

En el present annex es justifica la proposta sobre tots els paràmetres que defineixen geomètricament la configuració del projecte.

En concret, s'entén per disseny geomètric la definició en planta, la definició en alçat, i la definició en secció transversal.

Com a nomenclatura per a identificar els eixos s'ha utilitzat el següent criteri:

Eixos nord-est – sud-oest s'anomenen amb número, eixos oest - est s'anomenen amb lletra. Segons la seva funcionalitat, els eixos definits en el present projecte es divideixen en:

- Vials convencionals, els quals conformarien la vialitat principal del sector comunicant els diferents àmbits del pla parcial o aquests amb l'exterior. La nomenclatura usada és "eix-" i "rot-" per les rotondes. Dins d'aquests es podria discernir entre els eixos locals (A-23, 2A1, 3B, 4A, 4B, 5 i 6C, B, C, E, G, H, J23, K1, K2, K3) i els que comuniquen amb altres àmbits del municipi o l'autopista (A1,1A1, 1A2, A2A, A2B, A3, A4, 7, 8a, 8b, AB1, F, Gb).
- Eixos de prioritat invertida, es plantegen com a plataforma única, i serveixen per a unir els carrers del punt anterior i subdividir les illes que aquells definirien. S'anomenen amb el prefix "EP-".
- Camins que formen part de les zones verdes. El sentit d'incloure aquests eixos dins l'estudi, és la necessitat de definir un contorn consolidat de les parcel·les que tenen part del perímetre en zones verdes. En el projecte s'anomenen "camí-" i la seva numeració és correlativa de 1 a 11b i camins amb la finalitat de poder albergar línies elèctriques on s'anomenen –"camí-" amb numeració de L1 a L3.

L'àmbit de projecte es divideix en quatre etapes, aquestes subdividides en 8 fases que a la seva vegada es subdivideixen en 30 projectes diferenciats entre projecte d'urbanització pròpiament i projectes a realitzar en les zones verdes. A continuació es llisten les etapes, fases i projectes considerats en el planejament:

ETAPA 1

Fase A "Parc de la Ciència"

Urbanització

- A0** - Projecte camí L1 serveis
- A2** – Projecte d'urbanització de les parcel·les PC1 12 i Set Ball.
- A3** - Projecte d'urbanització Plaça A
- A4** - Projecte d'urbanització vorera eix-A1 al voltant d'Elena
- A5** - Projecte d'urbanització accessos parcel·la PC1 11 i 50.04 a la Carretera BP1413 i camí 10 amb col·lector fins eix K3

A7 - Projecte d'urbanització del segon tram dels eixos 3B i G*

A8 - Projecte d'instal·lació de la línia elèctrica de subministrament a la zona CPD

Zones verdes

A1 -Adequació topogràfica i urbanització de zona verda àmbits abocadors AVI Nord i Montserrat I

A6 - Projecte d'urbanització Parc del Torrent de Sant Marçal

A9 - Projecte d'instal·lació dels dipòsits de pre-tractament d'aigües de calçada i cunetes verdes

ETAPA2

Fase B "Estació"

Urbanització

B1 - Projecte d'urbanització vialitat entorn estació i entorns

B2 - Projecte dipòsit de reg

B3 - Projecte dels camins L2 i L3 serveis

Fase C "Entorn Castell"

Urbanització

C1 - Projecte d'urbanització de la Rambla castell i vials adjacents

C2 - Projecte d'urbanització entorn del Castell

Fase D "Entorn Can Planas"

Urbanització

D3 - Projecte d'urbanització dels vials a l'entorn del Parc

Zones verdes

D2 - Projecte d'urbanització del Parc del Castell i Torrent dels Gorgs

Fase E "Gorgs"

Urbanització

E1 - Projecte d'urbanització del passeig dels Gorgs + Connexions exteriors vorera i glorieta

E2 - Projecte d'urbanització Vials dels Gorgs

Zones verdes

E3 - Projecte d'urbanització Parc del Torrent dels Gorgs

PROJECTE D'OBRES D'URBANITZACIÓ DEL SECTOR PARC DE L'ALBA DE CERDANYOLA DEL VALLÈS.

E4 - Projecte constructiu de la Bassa de laminació de la Riera de Sant Cugat i entorns de Collserola-Can Codonyers

E5 - Projecte d'urbanització dels Espais lliures de Collserola-Can Codonyers-Granja Rosita

ETAPA3

Fase F "Front AP-7"

Urbanització

F1- Projecte d'urbanització Vialitat front AP-7

F3 - Perllongament fals túnel ferroviari

Zones verdes

F2 - Projecte d'urbanització Zona verda front AP7

Fase G "Connexió Sant Cugat N"

Urbanització

G1- Projecte d'urbanització Vialitat connexió nord amb Sant Cugat

Zones verdes

G2 - Projecte d'urbanització Corredor verd

ETAPA4

Fase H "Can Costa"

Urbanització

H1- Projecte d'urbanització del Vials entorn can Costa

Zones verdes

H2 - Projecte d'urbanització Espai lliure Collserola-Can Costa

H3 - Projecte d'urbanització Espai lliure Sacesa (nau)

Els eixos de traçat en relació amb els projectes es descriuen en la següent taula:

PROJECTE	EIX	NOM	PK inicial	PK final	LONGITUD

				TOTAL EIXOS (m)	23.670,128

Els paràmetres que determinen la geometria queden condicionats per:

- L'orografia del terreny on s'emplaça el pla parcial. En aquest cas es tracta d'un terreny força ondulat, on són habituals els pendents per sobre el 8%. Per altra banda travessen de nord a sud diversos cursos irregulars d'aigua, els principals són el torrent de can Magrans i el de can Fatjó, que obliga al traçat a discórrer amb un gàlib suficient que permeti el correcte desguàs dels cabals que es determina en l'estudi d'inundabilitat del projecte.
- La presència d'infraestructures existents. En aquest sentit, caldrà tenir en compte la línia de RENFE, els vials ja executats en fases anteriors, els vials existents fora de l'àmbit (límit amb els eixos, rot-2b, A4, B, C, E) o dins (1A1, 1A2 i rambla del Castell).

Finalment s'han tingut en compte les característiques del terreny existent per a la definició dels talussos en desmunt i terraplè, els gruixos de terra vegetal i el balanç de terres.

Normativa d'aplicació

No existeix una normativa general de referència d'obligat compliment per al disseny del viari urbà. Més concretament, l'ajuntament de Cerdanyola, que seria l'administració actuant en el desenvolupament d'aquest projecte, no disposa d'un manual propi o normativa que estableixi els criteris bàsics a tenir en compte en la definició geomètrica del traçat viari.

Donat que no hi ha una normativa d'obligat compliment, allà on sigui possible, es proposa adaptar els principis generals de la norma "3.1- I.C. Trazado de la Instrucción de Carreteras".

Un altre documents tècnic a tenir en compte en el disseny del viari urbà és el que el Ministeri de Foment va publicar l'any 1993, titulat "Carreteras Urbanas. Recomendaciones para su planeamiento y proyecto". Aquest es pot tenir en compte sobretot per adaptar els criteris de la normativa de carreteres a l'àmbit de projecte, sobretot i pel que respecta al dimensionament de les seccions transversals.

Càlcul del traçat i llistats

Per realitzar el traçat del projecte s'ha utilitzat el programa comercial de càlcul ISTRAM .

S'adjunten els llistats en planta i alçat així com llistat de punts singulars del traçat

Paràmetres de disseny del viari

Traçat en planta.

Donada una via qualsevol, el traçat en planta es defineix a partir d'una sèrie d'alineacions rectes, corbes circulars, i corbes de transició per evitar discontinuïtats en les curvatures entre les anteriors.

La variable principal que s'utilitza per a la definició dels paràmetres és la velocitat de projecte. Aquesta determina els valors de la visibilitat de la via (de parada, d'avançament i de creuament), la longitud mínima i màxima de les rectes, el radi i la longitud en corbes circulars (i en conseqüència el peralt), el paràmetre de les corbes de transició, i la relació entre radis consecutius.

Les alineacions en planta es defineixen per la situació en planta dels vèrtexs entre dues rectes, pel seu l'azimut, pel paràmetre dels acords, i pel centre i el radi de les circumferències.

En el disseny de vials urbans de baixa velocitat (≤ 50 Km/h), no és necessari usar corbes de transició.

Tanmateix, degut a la necessitat de deixar una previsió per al pas en un hipotètic futur de la sortida del túnel d'Horta, els eixos 7, 8a i 8b, es projecten seguint la traça en planta d'aquesta previsió. Amb la qual cosa els eixos es projecten amb rectes i corbes enllaçades amb clotoïdes.

En la taula adjunta es resumeixen els principals paràmetres del disseny dels eixos en planta.

Taula 2. Característiques del traçat en planta del projecte

Traçat en alçat.

El traçat en alçat es projecta mitjançant de trams successius d'inclinació constant, units mitjançant corbes de transició de pendent variable (en la instrucció de carreteres són paràboles).

En funció de la velocitat de projecte es determinen les inclinacions màximes de les rasants i la longitud mínima de l'acord vertical.

El traçat en alçat es determina a partir de la posició respecte de l'eix en planta (o punt kilomètric) dels vèrtex entre les rampes, la seva cota, i el pendent, i el paràmetre de l'acord (Kv).

Els paràmetres de disseny d'una carretera, depenen del tipus de via que es tracti (i per tant de la velocitat de projecte) i de l'entorn pel qual discorri (terreny pla, ondulat, accidentat o molt accidentat).

Fixats els paràmetres del projecte, el traçat òptim és el que millor s'ajusta al terreny salvant els condicionants físics del traçat. En aquest sentit, limiten molt el traçat els següents factors:

- Previsió de pas de la sortida del túnel d'Horta. Obliga a mantenir els nivells dels eixos 7 i 8 a una cota que el faci viable en un futur. Per la qual cosa aquests vials discorren de 4 a 9 metres per sobre el terreny natural.
- Pas per sobre els torrents. Queda fixat per la possibilitat de pas dels cabals a desguassar i per la possibilitat de connectar amb altres punts de pas obligats amb un pendent raonable.
- Rambla del Castell. Es mantenen els nivells de les rasants existents per tal de permetre el manteniment dels exemplars de plataners que actualment s'hi troben.
- Perímetre amb la infraestructura de RENFE al llarg de l'eix-A3
- Previsió de pas del tramvia al llarg de l'eix A3.

La normativa 3.1-IC limita tant els pendents màxims i mínims, com la longitud i característiques dels acords verticals.

Així, limita el pendent mínim excepcional al 0,2%, sempre i quant hi hagi un pendent màxim combinat transversal i longitudinal del 0,5%. En qualsevol cas, el projecte no preveu en cap vial, trams amb pendents inferiors al 0,5%.

Pel que respecta al pendent màxim admès per la norma entre el 6 i el 8% depenent de la categoria del vial. En general en l'àmbit de projecte, s'ha usa com a criteri limitador el pendent del 8%, tot i que en els vials principals s'ha tractat de no depassar el 6%. Aquesta limitació és especialment estricta en l'eix-A3, en previsió de pas del tramvia es limita el pendent al 6%.

Pel que respecta a l'acord vertical, es limita els valors mínims dels paràmetres per qüestions de visibilitat.

Vp	Kv convex	Kv cóncav
60	1085	1374
40	303	568

Taula 3. Paràmetres mínims dels acords verticals per qüestions de visibilitat

On Vp és la velocitat de projecte. Aquesta és la que permet definir els paràmetres d'una carretera en un tram determinat, en condicions de comoditat i seguretat.

Així mateix, també es restringeix la seva longitud per consideracions estètiques. La norma defineix que el valor absolut de la longitud de l'acord a de ser major al de la velocitat de projecte.

El criteri usat en projecte ha estat el següent:

- Eixos principals: acord mínim per sobre els 40 m. La longitud i el paràmetre de la paràbola s'ha tractat d'optimitzar tenint en compte la repercussió en el moviment de terres. En alguns

PROJECTE D'OBRES D'URBANITZACIÓ DEL SECTOR PARC DE L'ALBA DE CERDANYOLA DEL VALLÈS.

eixos principals aquesta longitud mínima no s'ha respectat, bàsicament coincidint amb l'inici o final d'eix i amb l'entroncament amb d'altres carrers.

- En vials de prioritat invertida s'ha mantingut una longitud d'acord superior a 30 m. En els inicis i finals d'eix no apareixen acords verticals per tal de realitzar un entroncament amb el pendent transversal de la vorera. El criteri emprat en els acords intermedis ha estat per adaptació del terreny.
- En els camins igualment només apareixen acords verticals intermedis, que també segueixen el criteri de millor adaptació al terreny.

Peralt

El peralt és el pendent transversal que cal donar a la via per tal de compensar l'acceleració centrífuga no compensada pel fregament transversal. El peralt es defineix en funció de la velocitat de projecte d'un tram.

Tanmateix la recta es dota de pendent transversal als vials per tal de facilitar la ràpida evacuació de les aigües que hi poden arribar. El pendent recomanable és del 2%, tot i que si les condicions de drenatge són les adequades, o els condicionants físics així ho exigeixen, aquest es podria arribar a reduir.

En les carreteres interurbanes els escorrentius aquestes surten de les calçades de la carretera cap les cunetes, altres elements de captació o lliurement cap els marges. En el cas de les vies urbanes, les aigües es porten fora la calçada, contra les vorades que delimiten la zona de trànsit de vehicles de les voreres. Per tal de facilitar-ne l'acumulació i evacuació, paral·lela a la vorada acostuma a aparèixer una línia a nivell de la calçada amb major pendent transversal que aquesta, de menys de 40 cm d'amplada anomenada rigola. Per ella les aigües de pluja recollides es condueixen als embornals. En el cas de seccions de plataforma única on conviuen al mateix nivell els vehicles i els vianants, cal projectar en la secció almenys un punt baix lluny de la façana dels edificis que permeti la recollida i conducció de les aigües cap els embornals.

El pendent transversal dels vials es fa variar i s'adapta en els creuaments amb els carrers transversals per tal de tenir continuïtat amb el longitudinal d'aquests.

El pendent transversal de les voreres queda limitat per la Orden VIV/561/2010 al 2%, tot i que en voreres es pot usar igualment fins l'1,5%.

Els vials convencionals s'han previst amb bombeig al mig de la calçada, mentre que els vials de prioritat invertida s'han previst amb forma de V. Finalment, els camis s'han projectat amb un sol pendent transversal cap la zona verda.

Secció transversal

El dimensionament de la secció transversal de la calçada d'una via cal interpretar-lo a dos nivells.

Per un costat, cal parlar de la capacitat de la via. El disseny viari ha de ser capaç d'absorbir tot el trànsit que hi circula sense causar pèrdua del nivell de servei. Per les vies interurbanes, la capacitat és funció, entre d'altres, del nombre de carrils i de l'amplada d'aquests. En un entorn urbà, la capacitat i el nivell de servei queda determinat, a més, per la presència de les interseccions amb altres carrers.

Per una altra costat el disseny de la secció transversal ha de garantir que el trànsit es produeix en condicions suficients de seguretat. En vies urbanes, per velocitats per sota els 50 Km/h, són admissibles carrils de fins a 3,00 m.

Per un altre costat, cal tenir present que l'amplada de les voreres queda limitada per la Orden VIV/561/2010, que preveu que aquestes disposin d'un espai lliure d'obstacles mínim de 1,80 m.

S'han previst els talussos de desmunt i terraplè amb la relació 3H:1V, que és el que s'ha vingut utilitzant en els vials ja executats del pla parcial.

En la següent taula es resumeix les característiques de les seccions tipus considerades:

PROJECTE D'OBRES D'URBANITZACIÓ DEL SECTOR PARC DE L'ALBA DE CERDANYOLA DEL VALLÈS.

PROJECTE D'OBRES D'URBANITZACIÓ DEL SECTOR PARC DE L'ALBA DE CERDANYOLA DEL VALLÈS.
